

MARITIME TECHNICAL CENTER!

Boatbuilding & Repair is a demanding career!

It involves a high level of skill, constant decision-making and meticulous care, creativity, patience, time and forethought. The trainee must master specific trade skills & technologies, understand their effect on the vessel in the water and develop refined 'soft skills' to interact with customers that often demand excellence.

The result is a continuous lack of qualified workers in this industry. Competent help is hard to find and even the smallest mistakes can be very costly.

The goal of the non-profit **Maritime Technical Center** is to establish an advanced, fully equipped Technical Trade training facility to provide training for a recognized Certificate to work in the marine industry.

Planned to positively impact lives, the location for this **Workforce Development and Re-training venture** is in a prime yachting area, ideally situated for the constant enrollment of new students. Modern training methods offer an increased potential for success. Any candidate who completes the in-take process can train for self-employment or for a job in the marine industry.
